

System concept

High-precision test systems for function tests on various types of switchgear device, including circuit breakers, disconnectors or earthing switches, regardless of the type of drive unit. They come in a mobile, 38 U industrial cabinet. The built-in acquisition unit ACTAS L is used for real-time data acquisition to execute and monitor test steps. ACTAS C systems can be operated using an integrated or external industrial PC on which the MS Windows™ operating system and the ACTAS software package has been installed.

The inputs and outputs are connected flexibly via Harting industrial plug connectors, making the test systems particularly suitable for use in laboratory and production environments. Digital and analog control outputs enable voltage or current sources to be controlled automatically, allowing fully automatic tests. In combination with PROMET, three-pole dynamic resistance measurements can be carried out on up to four interrupter units per pole.

Control outputs

Electronic switching outputs (IGBT) for single or three-phase control of the closing and opening coils. All operating sequences can be configured and output in increments of $1\,\mathrm{ms}$.

		J		
	IGBTs for controlling the	Voltage	300 VAC/DC	
	release coils	Current	100 A peak	Intrinsically safe via short-circuit
		Time resolution	0.1 ms	and overload protection
		Accuracy	±0.02 ms	
	Binary output	Relay output	30 VDC / 2 A (resistive load)	(max. 220 VDC)
	Analog outputs for controlling external	Analog outputs to set the release connected source		the voltage waveform and to
	voltage sources	Output range	010 VDC /1 mA	Load impedance $>10~k\Omega$
	Power supply to external sensors	Reference voltage for analog sensors	10 VDC	
		Supply voltage for incremental sensors	5 VDC or 10 VDC,	can be selected via jumper
Measurement inputs	General	Recording duration	Max. 13.33 min at Max. 8 s at 50 kHz	
-		Time resolution	0.02 ms	
		Time accuracy	±0.005 ms	
		A/D-conversion	16 bit	
		Accuracy	0.05% of range	
	Analog inputs	Oversampling	200 kHz per measu	rement channel (physical)
		Sampling rates	500 Hz50 kHz, a additional modules on 10 kHz for binar	Aux/Rel and CF work permanently
		Activation range	Main contacts <30 Resistive contacts combined with mai	(PIR) >30 Ω10 kΩ
		Measuring range close/open coil current	5 ADC / 30 ADC / 3	L00 A peak
		Coil voltage	300 VAC/DC	
		Measuring range motor	20 A RMS/ 50 A RM	1S / 100 A peak
		Motor voltage	500 VAC/DC	•
		Sensor inputs	±20 mA ±10 VDC	
	_	Protection	Galvanic isolations device isolated aga Galvanic isolations	inst earth

Binary inputs	Time resolution	0.02 ms
	Sampling rate	50 kHz Activation range 24300 VDC, adjustable
	Auxiliary contacts	External supply, activation range configurable
Incremental inputs for digital travel transducers	Limit frequency	200 kHz (70 kHz for CF modules)

Software

The system has been specially developed for the automated execution of all types of tests on switchgear devices. For this purpose the system is equipped with the complete ACTAS software package. It provides the following functions, for example:

- Automation functions Execution and monitoring of automatic test sequences and repetitive operations
 - Configurable dialogue boxes for entering results which have been determined manually
 - Interfaces for data import and export
 - Database integration and statistics function
 - Test object identification via barcode/RFID
 - Automated archiving of test data
 - Automatic allocation of transducer sets
 - Signalization of test status, e.g. by signaling device
 - User log-in and log-out during operation
 - Central data management
 - Automatic selection and control of operating circuits
 - Motor monitoring both during and independently of tests

Complete system

Operation, system control, data storage and evaluation are carried out using a standard, external Windows PC with the ACTAS 2.60 software.
